The realistic high-intensity rescue simulator

TAITO

AIR INFERNO

COCKPIT

SIMULATOR

A helicopter rescue simulation game. Fire extinguishing operations and rescues are carried out from a rescue operation base.

There are a total of six rounds: two paced for beginners, and four for intermediate and advanced players. Disaster scenes include a blazing tanker and a skyscraper fire.

If a player's total score is among the top three, the player will be able to input three letters of his or her name into a winners list.

BLAZING TANKER

Extinguish a blaze on a huge tanker and land the helicopter on the deck.

■ Landing on the sea will result in a crash.

SKYSCRAPER FIRE

Extinguish the fire and land the helicopter on the roof. Care must be taken of the strong winds on the roof top.

ARCHAEOLOGIST LOST IN THE DESERT

Find and rescue the archaeologist who has disappeared somewhere in the desert.

Care must be taken of sand storms. In this scene, the radar breaks down so the target distance must be checked constantly.

VIOLENT ERUPTION OF VOLCANIC ISLAND

Land on the heliport on the other side of the island.

Avoid volcanic rocks spewing out of two craters.
